

# Introducing MyIntealth™

We are excited to introduce MyIntealth, an important new milestone in our business transformation. MyIntealth is a new technology platform for accessing services offered by Intealth™ and its divisions, ECFMG® and FAIMER®. The result of a multi-year development effort, MyIntealth represents a dramatic enhancement for individuals and organizations that use our services, including global communities of physicians, health professions educators, and medical regulators.

## Bringing new benefits to those we serve

### Centralized Access to Services

MyIntealth eliminates the need to use multiple on-line applications to access different services.

- Centralized environment for services
- Single user ID and password for all services

### Single Applicant User Account

Applicants will establish a MyIntealth account once and use it to apply for all future services.

- Avoid duplicate entries when applying for new services
- One place to manage your user profile, payments, and notifications for all services

### Better User Experience

A centralized platform is more efficient for users and offers a consistent experience across our services. MyIntealth also will offer the convenience of completing more transactions on-line, eliminating many of our paper-based forms.

- Common look and feel across services
- Easier to learn and use than multiple systems
- On-line functionality replaces many paper-based forms, saving time and effort
- Integration with financial systems means credit card refunds are automated and faster

### A Foundation for Growth

MyIntealth will replace dozens of aging systems with an integrated and modern platform. This will support future enhancements and expansion into new services.

- Ease of enhancing our services. Watch for the MyIntealth mobile app as a future enhancement!
- Support for new services for users worldwide
